

Biodiversity Policy

Responsible Officer: Vice President, Sustainability

Applicability: All employees of Sempra and its business units

Purpose

Biodiversity is defined as the existence of a wide variety of plant and animal species in their natural environments. This policy emphasizes our commitment to protecting biodiversity in areas where we operate.

Policy

Energy infrastructure is an integral part of our communities. As we build and maintain infrastructure in the U.S. and Latin America, we are committed to integrating biodiversity preservation and enhancement considerations into our planning and decision-making processes.

The Sempra companies will:

- Engage with stakeholders such as communities, government, academia, nongovernmental organizations and others with expertise in biodiversity matters where appropriate when planning, building and operating energy infrastructure;
- Endeavor to minimize impacts to wildlife during the construction and operation of energy facilities, meeting or exceeding permit requirements;
- Protect threatened and endangered species of plants and animals, abiding by the letter and spirit of applicable laws and regulations related to biodiversity;
- Balance business needs with impacts on sensitive impact;
- Share our biodiversity commitments, successes, challenges and efforts with openness and transparency; and
- Remain committed to continuous improvement in our biodiversity programs and share best practices when appropriate.
