

Unlocking North America's energy potential

Sempra LNG develops, builds and invests in natural gas liquefaction facilities. We are pursuing five strategically located LNG opportunities in North America, with a goal of delivering 45 million tonnes per annum (Mtpa) of clean natural gas to the largest world markets, which would make Sempra Energy one of North America's largest exporters of LNG.

With proven knowledge, capabilities and experience, our company has demonstrated its ability to deliver strong commercial and development opportunities. We continue to build on our investment-grade plus credit rating and have established a track record of world-class safety and operational excellence.

Sempra LNG is unlocking North America's energy potential by providing abundant, clean, reliable and affordable U.S. natural gas to the world.

SAFETY

LNG is a safe and reliable way to transport energy. The excellent safety record of LNG worldwide is a result of proven and detailed industry standards, strong regulations and an industry commitment to risk management.

ENVIRONMENT

We believe the development of energy infrastructure can be compatible with the protection and preservation of the natural environment, if done in a responsible manner.

COMMUNITY

Sempra LNG is committed to the communities where we live and work. We invest time, talent and financial resources to help improve the quality of life for our customers, neighbors and employees.

LIQUEFACTION PROJECTS

Cameron LNG Phase 1: Our Cameron LNG joint-venture facility in Louisiana features three liquefaction trains capable of producing 12 million tonnes per annum (Mtpa). The first train began producing LNG in 2019. The second and third trains are expected to begin producing LNG in 2020.

Cameron LNG Phase 2: Cameron LNG has received approval from the Federal Energy Regulatory Commission to add two additional liquefaction trains and up to two additional full containment LNG storage tanks. Phase 2 is expected to increase the project's export capacity by 8 Mtpa.

Port Arthur LNG: Sempra LNG is developing the Port Arthur LNG liquefaction and export project in Southeast Texas. With direct access to the Gulf of Mexico, the proposed facility will include two natural gas liquefaction trains to enable the export of 11 Mtpa, as well as new natural gas pipelines to supply the terminal.

ECA LNG Phase 1: Sempra LNG and IEnova, Sempra Energy's subsidiary in Mexico, are developing a liquefaction project adjacent to the Energía Costa Azul (ECA) regasification terminal in Baja California, Mexico. Phase 1 will have an initial export capacity of approximately 2.4 Mtpa.

ECA LNG Phase 2: The project's Phase 2 is expected to produce approximately 12 Mtpa of LNG. The ECA liquefaction project will help meet future demand for LNG and provide the worldwide market with access to a reliable source of North American natural gas directly from the Pacific Rim.
